

a Hypothetical irrigation depth

b Hypothetical gross supply energy

assumed irrigation for greening
(2024 reference ET; scenarios)

desalinated seawater (SWRO)
(2.5–4 kWh/m³)

SIO supply per irrigated ha,
2020–22 (circles; bar = median)

treated wastewater
(0.3–0.93 kWh/m³)

0 20 40 60 80 100 120
electricity for that water (MWh/ha/yr)

10/17 workbook-joined SIO branch-years lie outside the assumed band; none is named Jeddah or Makkah.

Supplementary hypothetical scenario; no observed greening irrigation or energy use. Assumed depth uses 2024 ET.
